DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 6-15, 17-46, 48-148 and 151-153 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable for the reasons set forth in the action mailed 7/14/06.

3. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. Applicants have requested that the rejections be held in abeyance until allowable subject matter has been identified in the present application. At such time the rejection will be reviewed and addressed.

Claim Rejections - 35 USC § 102

Claim Rejections - 35 USC § 103

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 6-15, 17-46, 48-148 and 151-153 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Takesh et al. US 5,079,287.

8. The art rejection set forth in the action mailed 1/3/07 is withdrawn. This is in view of the newly amended claims and remarks filed in support thereof.

9. Takeshi et al. teaches polyolefin compositions used in injection molding applications. The applications disclosed at column 10 lines 25+ anticipate or render obvious the articles claimed.

10. This patent further exemplifies a liquid lubricant that is seen to meet the property limitations of the non-functional plasticizer claimed. Example 2 identifies Lucant HC-100 and incorporates 2 parts based on 100 parts of the polyolefin. This amount anticipates the amount claimed. Lucant HC-100 is known to have a specific gravity of

0.841, kinematic viscosity of 100 and a viscosity index of 165. As such the claims are anticipated and/or obvious from this disclosure.
